08 Conclusion

Executive Summary

During the month of April , 2025, the IT Support team focused on maintaining operational efficiency across all technical systems and ensuring that staff and departmental needs were met in a timely and effective manner. The team successfully resolved a range of hardware and software issues, provided real-time support to users, and implemented several enhancements to the organization's digital infrastructure.

A major area of focus this month was the continued development and improvement of the organization's website. Updates were made to both front-end content and backend functionalities to ensure optimal user experience, improved performance, and increased security. We also introduced new features and carried out scheduled maintenance to ensure the platform remains robust and up-to-date.

In addition to routine support tasks, the IT team responded to multiple service tickets, most of which were resolved within the same day. Common issues included connectivity interruptions, login problems, printer malfunctions, and system slowdowns. All critical incidents were addressed with minimal downtime and well-documented solutions for future reference.

Preventive measures were taken to reduce potential system failures, including regular software updates, data backups, and network performance monitoring. These efforts contributed to a stable IT environment with high availability and reliability.

Looking ahead, the IT department plans to focus on system audits, improve internal support workflows, and continue working on strategic initiatives like cloud integration, cybersecurity awareness, and digital transformation support.

Monthly Report

Issues Resolved

Hardware Issues

Issue	Department	Resolution	Date
Printer Not Connecting	FoodBank, Uxbridge	Reinstalled Drivers and Conneted the PC again to the computer	March 2025
Tablets are slow	CMC, Uxbridge	Freed up storage Space in tablets	March 2025
Desktop is Slow	CMC, Uxbridge	Ended Task and performed a disk clean up	March 2025
Printer Not Printing	Foodbank, Uxbridge	Printer Selection was not correct, selcted the correct printer.	March 2025
Tablet Not Charging	CMC, Uxbridge	Changed the Charger for the Tablet	March 2025

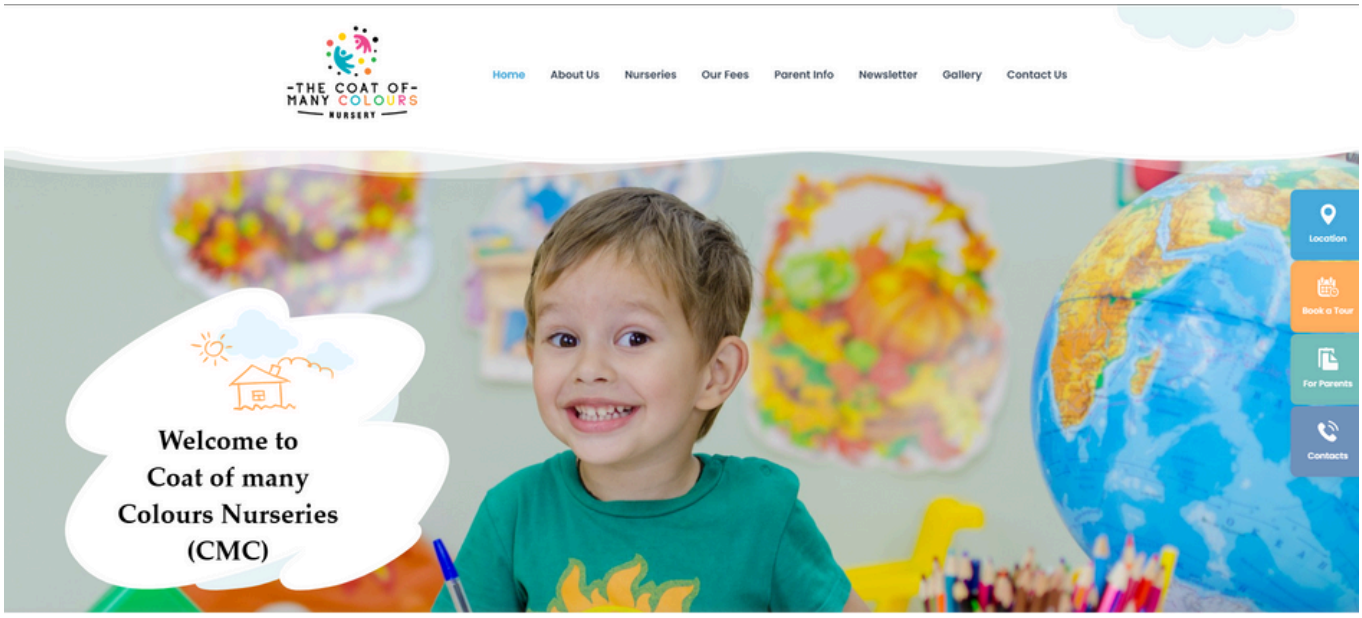
Software Issues

Issue	Department	Resolution	Date
Outlook Not Opening fully	Uxbridge	Restarted the Whole PC	March 2025
PC not Booting Properly	Uxbridge	Restarted and Updated the PC	March 2025

Website Updates and Developments

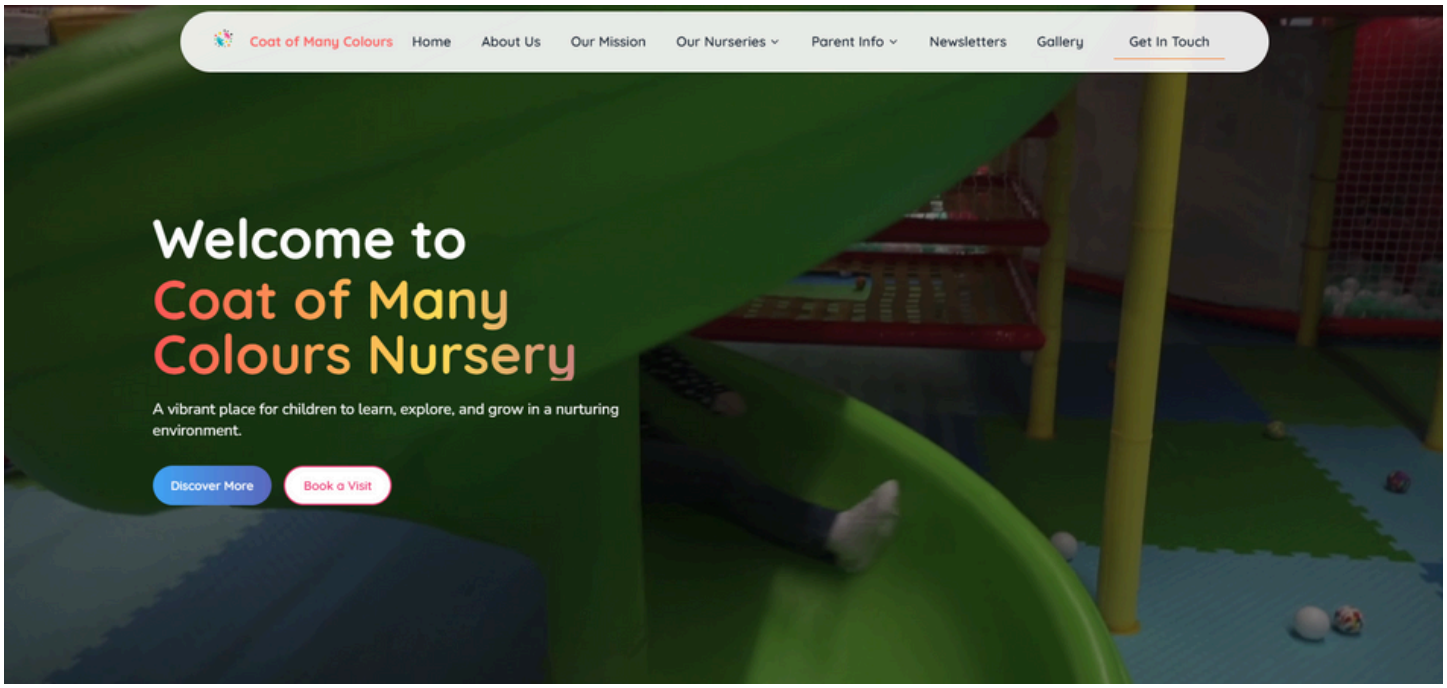
This month has seen significant progress in the ongoing development of the Coat of Many Colours Nurseries website. A large portion of the work has been focused on the frontend design, and we're pleased to report that the majority of those updates have now been completed. The site now features a modern, visually engaging, and mobile-responsive layout that aligns with the nursery's warm and professional identity. Key pages — including the homepage, staff profiles, contact section, and newly introduced events page — have all been redesigned with clarity, user experience, and accessibility in mind.

With the frontend largely in place, our attention is now shifting to the backend development phase. This includes integrating admin-friendly content management tools, finalizing dynamic functionality for sections like "Upcoming Events" and "Admissions," and ensuring overall system performance, security, and scalability. Once backend enhancements are complete, the website will be in an excellent position to serve both staff and parents with greater ease and efficiency.
This stage marks a major milestone in the project, and we look forward to delivering a fully functional, high-performing platform that reflects the excellence of Coat of Many Colours Nurseries.



Nursery Old Home Website

Website Updates and Developments



Upcoming New Nursery Home Website

Next Steps

In the coming weeks, we will focus on completing the following:

- **CMS Integration:** Implementing an easy-to-use content management system so staff can update content such as announcements, events, and newsletters without needing technical assistance.
- **Event & Admissions Functionality:** Enabling dynamic submission forms for event RSVPs and admissions inquiries, with backend storage and automated email responses
- **User Permissions & Security:** Setting up admin roles and access levels to ensure only authorized personnel can manage sensitive content.
- **Performance Testing & Final QA:** Conducting end-to-end testing to check responsiveness, page speed, and bug resolution across multiple devices and browsers.
- **Deployment & Training:** Preparing for final deployment along with a short training session for selected staff members on how to manage and maintain the site.

We are on track to deliver a secure, scalable, and user-friendly website that will support the growth and communication needs of Coat of Many Colours Nurseries.

Recomendations

• Upgrade Older Workstations to Improve Efficiency

Several staff members are currently using outdated desktop systems that are struggling to keep up with the demands of modern applications. These performance issues often result in slower boot times, application crashes, and general system lag all of which impact productivity. It is recommended that the organization consider replacing these older machines with updated hardware that meets current standards for speed, memory, and processing power. Upgrading to SSD-based systems with sufficient RAM (8GB minimum) and modern processors will provide a noticeable improvement in daily workflow, reduce technical support calls, and future-proof the workstation environment for upcoming software changes.

• Conduct a Cybersecurity Awareness Training Session for Staff

As cybersecurity threats continue to evolve, staff awareness remains the first line of defense against phishing, malware, and data breaches. Many breaches occur due to human error, such as clicking on malicious links or using weak passwords. We propose scheduling a short but focused cybersecurity awareness session for all staff. This training will cover essential topics such as identifying phishing emails, safe browsing habits, password hygiene, and reporting suspicious activity. The session can be delivered in-person or via a virtual workshop, with simple, non-technical language to ensure clarity and retention. Empowering staff with this knowledge will significantly enhance the organization's overall security posture.

Conclusion

Summary

In summary, this month has been a highly productive period for the IT department, with major strides made in both technical support and digital development — particularly the advancement of the Coat of Many Colours Nurseries website. The successful completion of most frontend tasks and the transition into backend development marks a key milestone toward delivering a fully functional and impactful platform.

Ongoing support tasks were handled efficiently, with hardware and software issues resolved promptly to maintain smooth operations across departments. Preventive maintenance and system monitoring ensured minimal disruptions, and recommendations have been outlined to further improve efficiency, accessibility, and security.

As we move forward, our focus will remain on completing the website backend, implementing recommended system upgrades, and continuing to deliver responsive, reliable IT support. These efforts reflect our commitment to supporting the growth, professionalism, and technological strength of the organization.
